

Dear FCC, As a person who requires the use of my car for travel between hospitals to provide emergency orthopaedic care I have found XM radio to be of great value. They are the only provider of up to date/ 24 hr coverage of local travel situations. In the last 4 weeks I have had 2 episodes where this information saved me 15-20 minutes on a single trip. I hope that you will reject NAB's petition 04-160 in that it may actually end up endangering lives by delaying emergency care to those in need. Thank you for your consideration of this potentially important matter.

Sincerely,
Daryl L Miller, M.D.
